

The first case of COVID-19 was reported in Wuhan, China, in December 2019. The virus is a novel coronavirus, and its origin is still unknown. It is believed to have originated in a wet market in Wuhan, where live animals are sold. The virus spread rapidly, and by early 2020, it had become a global pandemic.

1. Introduction

The COVID-19 pandemic has caused a global health crisis. It has resulted in millions of deaths and has disrupted the world's economy. The virus is highly contagious and can spread from person to person. It is important to understand the virus and how it spreads in order to prevent further outbreaks. The virus is a novel coronavirus, and its origin is still unknown. It is believed to have originated in a wet market in Wuhan, where live animals are sold. The virus spread rapidly, and by early 2020, it had become a global pandemic. The virus is highly contagious and can spread from person to person.
